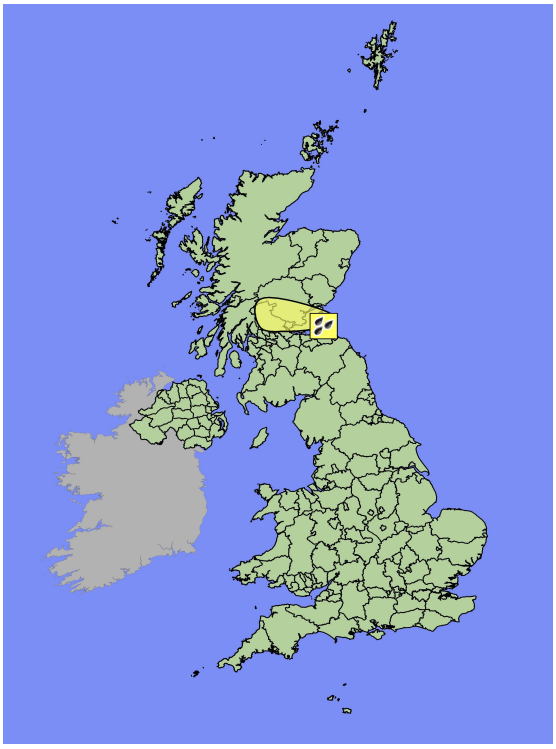
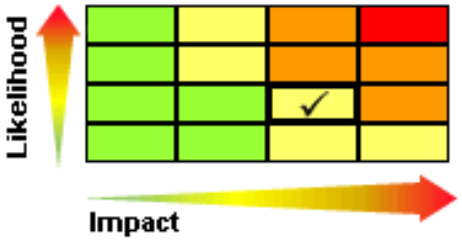
# National Severe Weather Warning Service





**Chief Forecasters Assessment**
A deep Atlantic low pressure area will push its frontal systems and associated rain across Scotland on Friday. Some of the rain will be heavy and, combined with snow melt, may lead to localised flooding and some disruption to travel in the area highlighted by the warning.

In addition the rain will be preceded by snow over the mountains, this combining with the strong to gale force southerly wind to produce temporary blizzard conditions. The snow will turn back to rain with a thaw setting in at all levels by late morning.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **06:00 on Fri, 28th Dec 2012** until **20:00 on Fri, 28th Dec 2012**

Further heavy rain, enhanced by snow melt, is expected for a time on Friday.

The public are advised that that this may lead to localised flooding and some disruption to travel.
